TOLLU COPPER PROJECT UPDATE

Redstone Resources Limited recently announced completion of a reverse circulation (RC) drilling programme at its wholly owned Tollu copper Project in the West Musgrave region of Western Australia.

As previously reported, Redstone has identified surface copper reef mineralisation over an area of at least 6 km². Shallow reconnaissance RAB and RC drilling over a small part of the mineralised reef system had previously intersected significant widths of low grade copper mineralisation in the oxidised zone.

Recent more detailed investigation of the copper vein system, has mapped a much larger number of copper mineralised veins (malachite and tenorite) at surface.

During the current RC drilling programme Redstone drilled 5 angled holes into part of the central zone of the steeply dipping vein system to test at depth, mineralisation identified from the earlier drilling programme. One hole had previously been drilled into this zone and had intersected copper mineralisation of 18m at 0.62% from 21 metres depth in the oxidised zone.

Geological inspection of samples from three of the central zone drill holes has been completed with visual evidence of the presence of sulphide rich copper mineralisation (chalcopyrite) in each hole over significant intervals (approximately 15m).

The conclusion is that the oxidised mineralised veins are all derived from a primary sulphide (mainly chalcopyrite) source.

Assays for these sulphide rich intersections are expected in mid June 2010. The Company will release material results as they are received.

ATTRIBUTION

The information in this report that relates to exploration results is based on information compiled by Dr Joao Orestes Santos, a member of the Australasian Institute of Geoscientists. Dr Santos has sufficient experience relevant to the style of mineralisation under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2004 Edition of the 'Australasian Code for Reporting Exploration Results, Mineral Resources and Ore Reserves'. Dr Santos consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.
